DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. How can the nanostructures further comprise layered planes of graphite?

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 15, 16, and 17 are rejected under 35 U.S.C. 102(e) as being anticipated over Binette et al (6,561,928). Binette discloses a golf ball comprising a core, an inner cover layer, and an outer cover layer. The inner cover layer can be made from ionomers or non-ionomeric materials such as polyethylene copolymers (col. 23). The inner cover layer may also include graphite as a filler.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-52 of U.S. Patent No. 6,802,784. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present invention and the '784 patent claim golf balls comprising three layers and exfoliated graphite in the intermediate layer.

Response to Arguments

Applicant's arguments filed 1-28-05 have been fully considered but they are not persuasive. The 35 USC 112 rejection is maintained. The claim as currently amended is not understood. Should the claim read, "The nanostructures form nonosheets"? The 102 rejection over Binette is also maintained. Applicant argues the specification defines the term nanostructure as being measured in microns, nanometer, or angstroms. The specification does not provide a definition regarding dimensions for the term

nanostructure. However, even if the specification did provide such a definition it would not overcome the prior art because dimensions are not claimed. Simply stating graphite is measured using a certain unit is not a limitation when values aren't given. The graphite disclosed by Binette can easily be measured using any type of unit.

The terminal disclaimer has been received but is not currently processed. The Examiner will remove the double patenting rejection in the next action once the td is approved.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
